

## 3050 | Integrated Communications Platform (ICP)

Mitel Networks™ introduces a simple, cost-effective integrated communication platform (ICP) that provides broadband access to voice, data and video at every desk. Through a single network infrastructure, the Mitel Networks 3050 Integrated Communications Platform (ICP) produces almost instant return on investment. It delivers unparalleled ease, flexibility, scalability, and cost benefits that help networks of small offices gain big business advantages – without the big business costs.

### **An advanced telephone system**

The 3050 ICP delivers advanced business telephone features to small offices and provides a single, unified telephony system across all networked locations. Supporting existing third-party phones as well as Mitel Networks 5055 SIP Phone, the 3050 ICP enhances your professional image and improves inter-office communication.

### **A powerful local area network that handles your data layer**

In addition to a professional business telephone system, the 3050 ICP also manages a small business's networking needs with a local area network (LAN). It provides a business server for file and print sharing, e-mail server, a web server, high-speed Internet access, firewall security protection and a secure virtual private network (VPN) for remote users.

**MITEL**

it's about **YOU**

### Build your competitive edge

With the 3050 ICP, small offices and networked small offices can save money, simplify connectivity and take advantage of emerging business application and web-based capabilities, gaining the same advantages as big businesses without big costs.

### Future-Proof Your Investment

The 3050 ICP is built on the robust and popular Linux platform, an efficient, fast-performing system that interacts easily with other office systems. The 3050 ICP uses SIP (Session Initiation Protocol), which is at the heart of an explosion of new services built into phones, computers, servers, wireless devices, payment systems and security systems.

Feature	Description	Benefit
Networked Multimedia	Enables the use of several combined media, such as voice, video and data. Different users on different IP devices (phones, computers) can share or collaborate using images, sound, video, voice and many other features.	Maximize one network Lower operating costs by using the 3050 ICP on its own or to connect networks of 3050 ICPs Increases competitive advantage and productivity with integrated communication for both employees and customers
Internet Powered	The 3050 ICP connects remote workers and multiple office locations over a simple broadband connection while using SIP, the defacto multimedia and VoIP standard.	Connect and communicate more easily and cost effectively by leveraging the Internet for voice, video and data.
Auto Attendant	Provides automated call routing to individual extensions, hunt groups or ring groups. Can also route calls to ring groups or hunt groups, such as customer or technical service teams.	Enhance business' professional image with automated greeting and call routing. Streamline administrative duties while never letting a call go unanswered. Create a unified image with a single attendant that connects callers to specialists and employees even if they are geographically dispersed.
Voice Mail	A powerful, programmable feature for each employee that answers the phone while the employee is away, busy or on another call. Users can access the system remotely to retrieve messages from any phone or from an e-mail client. Includes personalized message/greeting.	Increase productivity, accessibility and personalization of communication. Users work more freely while enjoying closer access to customers. Complete more business and increase customer satisfaction by never leaving a call unanswered.
Downloadable Applications	Additional software features that can be obtained over the Internet from the Mitel Networks' Applications Management Center (AMC), from service providers, or from third-party vendors. An extensive list of applications is available including fax server, Server-to-Server VPN, Virus protection, and many more benefits.	Save time and money with rapidly deployed new applications as they are needed. Provision or request a new application via the web almost instantaneously.
